

## TESTIMONIAL

We have been using a nitrogen evaporator Bio-eVAP manufactured by **TAKAHE ANALYTICAL INSTRUMENTS** since November 2016 in our laboratory at our Laboratory in **Hyderabad**.

We have had a smooth installation with complete IQ, OQ, PQ documentation and training of our team.

The evaporation in the Bio-eVap is consistent and gives reproducible results. It eases our operation and our productivity has been increased by 20% due to higher capacity of this 100 position evaporator. Takahe Analytical Instruments has been present for any query, support and after sales service when required. The instrument has been performing to standards and is easy to use.

We are very satisfied with the performance of the system and recommend this instrument to labs having similar requirement.
